PROFILE

Passionate and optimistic Full Stack Developer/Senior Frontend Engineer with Computer Science degree, working remotely in India. I create well-documented scalable web applications for millions of users around the world.

WORK EXPERIENCE

Full Stack Developer

Cimet (Vconnex Pvt Ltd)

Aug 2022 – Present

- worked on exciting projects from scratch using micro services
- created a complete product which included Single Sign On (SSO) login with Salesforce and Microsoft using Auth JS and Next JS
- secured the login with JWT on server side for validation and React Context on client side
- built the content (CMS) for the app with Keystone and integrated with our main app through Rest and GraphQL
- built a complete product from scratch that helps sales team to adhere to compliance, perform faster & more efficient sales
- created and migrated most of the projects to Typescript and other modern web technologies

Senior Frontend Engineer

Fullness Web Solutions

May 2020 – Aug 2022

- created new verticals for an Australian fintech product (RateCity) from schema, business logic, api and frontend
- developed fast data access with ElasticSearch & GraphQL
- enhanced CMS built on Keystone & created new functionalities to help content people make dynamic pages faster and Prisma
- mastered ReactJS to build scalable and reusable components
- liaised with designers to maintain the atomic design system & maintaining the consistency of development
- enhanced lighthouse performance and implemented test cases with Cypress
- got promoted to Senior Frontend Engineer after a year

Frontend Developer

Simply Syntax Technologies

April 2019 – May 2020

- started out as UI UX Designer
- designed aesthetically pleasing and highly functional websites
- liaised with the clients to understand their requirements
- got promoted to Frontend Developer
- designed & developed clean responsive layouts for the businesses
- did user experience research to make each site stand out and help them to connect with the target audience
- learned React and NodeJS to build a watermarking app for stock photography client
